CAREER SUMMARY

Computer Science Engineering student experienced in data-driven and full-stack applications using Nodejs, MERN stack, and Flutter, with skills in data analysis, REST APIs, real-time systems, and scalable application development for practical solutions.

EDUCATION

B. Tech, Computer Science & Engineering

Chhatrapati Shivaji Institute of Technology, Durg

Jun 2023 – Present | CGPA: 8.0

Certifications available in portfolio:

<https://my-portfolio-omega-drab-19.vercel.app/>

SKILLS

Languages:

Python, JavaScript, C++, Java

Data Tools:

Excel, Pandas (basic), NumPy (basic), Matplotlib (basic)

Frameworks:

React.js, Node.js, Express.js, Flutter

Databases:

MongoDB, MySQL

Tools:

Git, GitHub, Postman, OpenAI APIs

Concepts:

Data analysis, REST APIs, JSON handling, full-stack development

PROFESSIONAL DEVELOPMENT

Vocational Training – Full-Stack and Data-Driven Application Development

Jan 2025 – Mar 2025

- Built a MERN-based Blood Donation Directory managing **100+ donor records** with search and location filters.
- Implemented RESTful APIs and optimized database queries to handle multiple requests and reduce retrieval time by **~30%**.
- Designed user-friendly forms and dashboards to **streamline donor registration and search operations**.

EXPERIENCE

Data Science Intern | STPI (Software Technology Parks of India)

Jan 2026 – Present

- Completed training in Python, Pandas, NumPy, and data visualization for practical data analysis and preprocessing tasks.
- Worked on machine learning concepts including linear and logistic regression for predictive modeling and data-driven analysis.
- Applied NLP techniques such as text vectorization and word embeddings for basic text analysis and feature extraction.
- Performed statistical analysis using probability concepts and hypothesis testing techniques on datasets.

Web Development Intern – Frontend Development | Grapp Tech, Bangalore

Jul 2024 – Aug 2024

- Developed **5+ responsive web pages** using React.js, improving compatibility across desktop, tablet, and mobile.
- Optimized UI components and asset loading, reducing page load time by **~20%** while supporting client feature delivery.
- Collaborated with the team to deliver data-driven client features and functional UI improvements.

PROJECTS

Chat Application – Real-Time Messaging System | MERN Stack

Dec 2024 – Jan 2025

- Built a real-time chat application with **<1s delivery** using MERN and Socket.IO for seamless, live communication.
- Implemented **5+ core features** including user authentication, live messaging, online status, and persistent chat history.
- Managed structured message data using MongoDB for efficient storage and retrieval.

ASK – Academic Smart Knowledge Question Analyzer | Flutter

Sept 2025

- Developed a Flutter app analyzing **100+ past exam questions** to identify high-frequency and important topics.
- Implemented a ranking system to highlight the **top 20% most repeated and important questions**.
- Enabled topic-based filtering to support faster data exploration and efficient exam revision.

Weather Application – Real-Time Forecast App | Flutter

Aug 2025

- Built a weather app retrieving real-time data for **10,000+ cities** via API integration.
- Processed and displayed weather data in **under 2 seconds** using optimized API handling.
- GitHub: github.com/lsanjaykumar/weather-app
